

Anh Khoi Le

Software Engineer · Mobile Developer

khoile0908540@gmail.com · Portfolio · GitHub · LinkedIn · Ho Chi Minh City, Vietnam

SUMMARY

Software engineer building mobile and web products in Flutter, most recently at Vietnam Silicon. I run AI coding agents in production to ship faster without giving up code quality, holding the line with rigorous review. B.Eng in Software Engineering, UIT (VNU-HCM).

EXPERIENCE

Vietnam Silicon Software Engineer · Ho Chi Minh City	Dec 2025 - May 2026
Cut review-cycle time by bringing Claude Code into the team workflow for automated refactoring, feature work, and unit testing, with manual review holding the quality bar. Replaced a national agriculture ministry's manual paperwork with a searchable digital audit trail, building the Flutter Web platform that digitizes durian export and supply-chain tracking. Delivered AI-powered agricultural guidance to farmers offline, shipping a cross-platform app whose local LLM runs on-device with no cloud dependency. Tech: Flutter · Flutter Web · LLM integration · Claude Code · Agile	
ITBee Solutions Mobile Developer · Ho Chi Minh City	May 2025 - Dec 2025
Put sub-second telemetry on the factory floor, building a mobile app that monitors and controls an automotive manufacturer's robotic arms in real time. Led a sub-team of 4 across two products, owning the Git workflow, code reviews, PR merges, and the full build cycle. Cut jank on critical screens, shipping performance work that smoothed heavy list rendering and complex animations. Tech: Flutter · Real-time · Team lead	
NPH Digital Software Engineer · Remote	Nov 2024 - May 2025
Shipped livestreaming and real-time messaging into a social-networking app ahead of public launch, integrating the Agora SDK and Socket.io. Eliminated a recurring state-sync bug by restructuring BLoC state management across 6 screens and removing nested stream subscriptions. Tech: Flutter · BLoC · Agora · Socket.io	

Software Developer, Intern · Ho Chi Minh City

Launched a cross-platform kitchen-management app to iOS and Android, built in Flutter/Dart with Riverpod.

Kept orders updating in real time with minimal latency, integrating POS systems and peer-to-peer sync.

Tech: Flutter · Dart · Riverpod

SKILLS

Mobile: Flutter, Dart, BLoC, Riverpod, iOS & Android

AI / Agentic: Claude Code, Local LLMs (Ollama), LLM integration, Agentic workflows

Web: TypeScript, React, Astro, HTML & CSS

Platform & tooling: Firebase, Git / GitHub, Agile, Testing & debugging, Jira

PROJECTS

agent-harness Bash · Python · Agentic · Tooling

One source of truth for a fleet of AI coding agents: shared behavioral rules, a destructive-op safety hook, and a typed memory design across Claude Code and Pi.

owlet Swift · Local LLM · macOS

A friendly local-LLM toolkit for macOS. Its Rewriter is a Grammarly-style popup: select text, hit a hotkey, and it is rewritten in place with an inline diff, all on a local Ollama model so nothing leaves your machine.

second-brain TypeScript · React · Data viz

A read-only React dashboard that turns local AI coding-session logs into a navigable knowledge graph: full-text search, backlinks, and live updates over WebSocket.

EDUCATION

University of Information Technology, VNU-HCM

B.Eng, Software Engineering · 2022 - 2026

Tran Hung Dao High School for the Gifted

Honors Class · 2019 - 2022

RECOGNITION

Second Prize, WeCode Challenge, CS Faculty, UIT (2023)

Bronze Medal, Olympiad 30/4, Regional (2022)

Second Prize, Provincial Informatics Olympiad (2021)

TOEIC L&R 720 (2024)

LANGUAGES

Vietnamese (Native) · English (Professional (TOEIC 720))
